AB To allow cleaning of sebum ducts for **acne prophylaxis** the authors suggest use of triethanolamine buffered with anionic polymers of acrylic and methacrylic acid. In these preliminary researches addition. . . of Eudragit S-100 complexes. Eudragit L-100 and L-100-55 proved milder action. These complexes may be applied for further examinations on **acne prevention**.

AB . . . female caretakers and those with more favorable attitudes
regarding sun protection use. Sunscreen was the most frequently used
measure, and **preventing sunburn** was the primary reason for using sun
protection. Respondents held several unfavorable sun protection
attitudes, including the belief that sun. . . is infrequent and
consists primarily of applying sunscreen rather than methods that reduce
sun exposure. Parents primarily use sunscreen to **prevent sunburn** and
may increase their children's overall sun exposure as a result.

AB . . . borne out by reality? Sunscreens applied at the thickness tested by manufacturers need only possess an SPF of 15 to **prevent sunburn** even for all day exposure in tropical sunshine. Yet behavioural studies show that high SPF (>15) sunscreens do not always **prevent sunburn**. That the protection achieved is often less than that expected depends upon a number of factors: application thickness and technique; . . .
